

1. Estas duas regras verificam um deadlock.

pEat depende de pHungry, que depende de pStopEating  
(que depende de pEat)

$(\text{pHungry} \rightarrow \text{Hungry}) \rightarrow (\text{pEat} \rightarrow \text{pStopEating} \rightarrow \sim \text{Hungry})$       **Verifica**

$(\sim \text{Hungry} \ \& \ \text{pEat}) \mid (\text{Hungry} \ \& \ \text{pHungry})$       **Não Verifica**

2.

$G((\text{Philosopher} \ \& \ \text{left} \ \& \ \sim \text{Eating}) \ \& \ (\text{Philosopher} \ \& \ \text{Eating}) \ \& \ (\text{Philosopher} \ \& \ \text{right} \ \& \ \sim \text{Eating}))$

**Não Verifica**

3.  $G(\text{pHungry} \rightarrow \text{pEat})$

**Não Verifica**
